# A Study on Quality of Work Life of the It Employees 

Dr. Smitha Sambrani ${ }^{1}$, Gopisetty Hemalatha ${ }^{2}$<br>${ }^{1}$ Assistant Professor, Dept. of Business Management, OU<br>${ }^{2}$ Research Scholar, Dept. of Business Management, OU

#### Abstract

The present study aims at understanding the perception of employees towards QWL and the association between demographic variables and latent variables of QWL. The data is collected from the top five IT companies located in Hyderabad i.e. TCS, INFOSYS, WIPRO, IBM, Google Further the reliability and validity of the Questionnaire is tested by Cornbach's alpha .A detailed analysis is perused in exploring the association of the variables Quality of work life and Demographic variables. A strong positive correlation is found between the variables Quality of work life and Demographic variables.

Key Words: Quality of work life, IT companies, Demographic variables.

## I. INTRODUCTION

IT industry is one of the influencing industry on the India economy. The NASSCOM reports suggest that by 2020, IT industry will generate revenue $\$ 300$ billion. The core resource of Indian IT industry is its human resources. So, managing and improving these human resources enhances the industry growth. The human resources /IT professionals have to be efficiently handled for the improvement of the industry. The Quality of work life is one of the major factors that influence the retention of the employees. Many studies suggest that the employees committed and satisfied with satisfactory Quality work life conditions.

## II. QUALITY OF WORK LIFE

"QWL is a process of work organizations which enable its members at all levels to actively; participate in shaping the organizations environment, methods and outcomes. This value based process is aimed towards meeting the twin goals of enhanced effectiveness of organizations and improved quality of life at work for employees. "-The American Society of Training and Development

## III. REVIEW OF LITERATURE

(Muñoz de Bustillo Llorente \& Fernández Macías, 2005) studied that the working life factors like wages, working hours, job quality effect job satisfaction, with reference to Spain.
(Gayathiri \& Ramakrishnan, 2013) analyzed that performance of nurses in hospitals are determined by organizational structures, interdisciplinary collaboration, increased knowledge and specialization, advancement of technology, new health problems and health care policy, and sophistication in medical education.
(Basher Rubel \& Kee, 2014)conducted a study in Bangladesh and found that QWL as antecedent of job satisfaction and performance of employee. The major factors influencing QWL are compensation and benefits, supervisor behavior and work life balance.
(Krueger et al., 2002)conducted a study in Canada on 5,486 full, part and causal time (non-physician) staff and found that the co-worker and supervisor support; teamwork and communication; job demands and decision authority; organization characteristics; patient/resident care; compensation and benefits; staff training and development; and impressions of the organization had a great impact on job satisfaction.
(Hosseinabadi, Karampourian, Beiranvand, \& Pournia, 2013) investigated the effect of implementation of quality circles on nurses' quality of work-life and job satisfaction. This study confirms the effectiveness of quality circles in
improving quality of work-life and job satisfaction of nurses working in EMS, and offers their application as a management method that can be used by EMS managers.

## IV. NEED OF THE STUDY

According to Walton (1975), "dissatisfaction with working life is a problem which affects almost all workers at one time or another, regardless of position or status". The intellectual capital of IT industry is its human resources, there are many dissatisfying factors with their working life i.e. long working hours, lack flexible work hours, different time horizons to work, adaptability to new software packages, work-life conflicts etc.,. In the present study an attempt is made to understand the perceptions of IT employees, towards Quality of work life.

## V. OBJECTIVES OF THE STUDY

1. To study the perception of employees on Quality work life in select IT companies. 2. To study the relationship between QWL (one dependent variable) and several independent variables (demographic and QWL variables) IT industry.

## Hypotheses of the Study

H0: There is no association between Demographic variables and Quality of work life.
H1: There is association between Demographic variables and Quality of work life.

## Research Methodology

The present study is conducted at Hyderabad city, where top five IT companies with population above 5000 has been randomly chosen. The information was collected from five IT companies i.e. TCS, INFOSYS, WIPRO, IBM, Google. The sample is selected by convenience sampling methodology. A structured questionnaire designed by Richard E Walton (1974) was given to the employees of the selected IT companies for primary data collection. The pilot study is performed on a sample of 66 employees in chosen companies.

## DATA ANALYSIS

## Reliability Test:

The cornbach's alpha is used to test the reliability and validity of the Questionnaire. The overall Cornbach's alpha is 0.853 for 51 items indicates that the questionnaire is reliable for study.

## Reliability Statistics

| Cronbach's Alpha | N of Items |
| :--- | :--- |
| .853 | 51 |

## ANOVA

## Descriptives

quality of work
life

|  | N | Mean | Std. <br> Deviation | Std. Error | 95\% Confidence Interval for Mean |  | Minimum | Maximum |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Lower Bound | Upper Bound |  |  |
| 26-30 | 27 | 84.5556 | 15.44801 | 2.97297 | 78.4445 | 90.6666 | 66.00 | 107.00 |
| 31-35 | 39 | 90.0769 | 9.60642 | 1.53826 | 86.9629 | 93.1910 | 71.00 | 103.00 |
| Total | 66 | 87.8182 | 12.52555 | 1.54179 | 84.7390 | 90.8973 | 66.00 | 107.00 |

## ANOVA

quality of work life

|  | Sum of Squares | df | Mean Square | F | Sig. |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Between Groups | 486.382 | 1 | 486.382 | 3.205 | .078 |
| Within Groups | 9711.436 | 64 | 151.741 |  |  |

## ANOVA

quality of work life

|  | Sum of Squares | df | Mean Square | F | Sig. |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Between Groups | 486.382 | 1 | 486.382 | 3.205 | .078 |
| Within Groups | 9711.436 | 64 | 151.741 |  |  |
| Total | 10197.818 | 65 |  |  |  |

The F value is 3.205 at $\mathrm{p}=0.078$. The $\mathrm{p}>0.05$.Therefore null hypotheses is rejected and alternate hypotheses is accepted i.e. there is a significant difference in Quality of work life across the demographic variable age.

H01b: There is no significant difference in Quality work life across the demographic variables gender of the IT professionals

## Descriptives

quality of work
life

|  | N | Mean | Std. Deviation | Std. Error | 95\% Confidence Interval for Mean |  | Minimum | Maximum |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Lower Bound | Upper Bound |  |  |
| male | 39 | 90.6923 | 11.04334 | 1.76835 | 87.1125 | 94.2721 | 71.00 | 107.00 |
| female | 27 | 83.6667 | 13.55331 | 2.60834 | 78.3052 | 89.0282 | 66.00 | 100.00 |
| Total | 66 | 87.8182 | 12.52555 | 1.54179 | 84.7390 | 90.8973 | 66.00 | 107.00 |

## ANOVA

quality of work life

|  | Sum of Squares | df | Mean Square | F | Sig. |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Between Groups | 787.510 | 1 | 787.510 | 5.356 | .024 |
| Within Groups | 9410.308 | 64 | 147.036 |  |  |
| Total | 10197.818 | 65 |  |  |  |

The F value is 5.356 at $\mathrm{p}=0.024$. The $\mathrm{p}<0.05$.Therefore null hypotheses is accepted. There is no significant difference in Quality work life across the demographic variables gender of the IT professionals

H01c: There is no significant difference in Quality work life across the demographic variables marital status of the IT professionals.

## Descriptives

quality of work life

|  | N | Mean | Std. <br> Deviation | Std. Error | 95\% Confidence Interval for Mean |  | Minimum | Maximum |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  | Lower Bound | Upper Bound |  |  |
| single | 27 | 88.3333 | 11.79635 | 2.27021 | 83.6669 | 92.9998 | 71.00 | 107.00 |
| married | 39 | 87.4615 | 13.14663 | 2.10515 | 83.1999 | 91.7232 | 66.00 | 103.00 |
| Total | 66 | 87.8182 | 12.52555 | 1.54179 | 84.7390 | 90.8973 | 66.00 | 107.00 |

## ANOVA

quality of work life

|  | Sum of Squares | df | Mean Square | F | Sig. |
| :--- | :--- | :--- | :--- | :--- | :--- |
| Between Groups | 12.126 | 1 | 12.126 | .076 | .783 |
| Within Groups | 10185.692 | 64 | 159.151 |  |  |
| Total | 10197.818 | 65 |  |  |  |

The F value is .076 at $\mathrm{p}=0.783$. The $\mathrm{p}>0.05$.Therefore null hypotheses is rejected and alternate hypotheses is accepted i.e there is a significant difference in Quality of work life across the demographic variable marital status.

H01d: There is no significant difference in Quality work life across the demographic variables education of the IT professionals.

## Descriptives

quality of work life

| Total | 10197.818 | 65 |  |  |  |

The F value is 8.153 at $\mathrm{p}=0.001$. The $\mathrm{p}<0.05$.Therefore null hypotheses is accepted. There is no significant difference in Quality work life across the demographic variables experience of the IT professionals. Experience of the employee doesn't affect the Quality of work life.

## Regression of demographic variables and QWL variables

A multiple Regression is chosen to assess the relationship between one dependent variable and several independent variables. It provides estimates of the unique contribution for prediction of each of the independent variables using the equation of a straight line(Tabachnick \&Fidell, 2001).Multi Regression is an extension of Bi-variate correlation(Manning\&Munro,2007).

## Model Summary

a. Predictors: (Constant), experience in current company, SHWC, Qualification of employee, WTLS, Gender of employee, marital status of employee, SI, designation, salary of employee, Age of employee, SWL, OFD, OFGS, AFC, c

From the above table it is evident that the Demographic and QWL variables have a strong QWL Scores ( $\mathrm{R} 2=0.995$ ) i.e. Demographic and QWL variables explain $99.5 \%$ of the variance in QWL score.

The strength of association of the demographic and QWL variables with respect to QWL score can be known through the coefficients of the linear regression. From the below table it can be noticed that 14 variables (demographic and QWL variables) have impact on Quality of Work Life in a significant way at ( $\mathrm{p}<0.005$ ), except the marital status where $\mathrm{p}>0.005$.

From the standardized coefficients we can notice that the Constitutionalism (1.116), Opportunity for Growth and Support (0.772), Designation (0.736) is having a strong positive impact on QWL score. Among the negative contributors Age ( -0.863 ) is having a great impact on Quality of Work Life.

## CONCLUSION

Quality of work life is explained by Demographic variables and Latent variables under study up to $99.5 \%$, which can known from the R Square value ( 0.995 ). A detailed analysis is perused in exploring the association of the variables Quality of work life and Demographic variables. A strong positive correlation is found between the variables Quality of work life and Demographic variables. So IT industry has to concentrate on its intellectual capital for enhancing its
growth. By providing a satisfactory Quality work life they make employees committed and satisfied. It is found that that QWL in IT industry influences Job satisfaction, job involvement, Organizational commitment, Tenure to greater extent compared to other industry. Absenteeism, minor accidents, grievances and quits can be reduced by improving QWL. The companies with effective QWL can efficiently attract and retain employees. Thus, QWL stimulates the employee job satisfaction and operational productivity.
